

# This is Our Future!

## INTRODUCTION

Several technologies have been secretly shared by certain alien people with selected groups on earth for decades. As part of a research team, Jared Rand claims to have tested and verified the effectiveness of all the following technologies.

Once the economic and political situation has been reoriented to favor the population of the world instead of an "Elite" these inventions will be distributed across the planet (in a slow transition to allow adaptation) and it is expected that each country will manage - Los, regardless of any central authority.

## MED BEDS

Structures in which people meet down for a few minutes, they fall into a deep sleep and go through a painless process for healing body spray, the recreation of a body part missing and / or full rejuvenation (even reversing decades).

Administered by trained health professionals, the device identifies and verifies body DNA for imperfections, then uses plasma and taquiônica technology with an artificial / controllable intelligence computer to be treated according to the person's desire. The body is renewed, but the mind remains immutable (memory, knowledge, wisdom, qualities, etc.).

After the session, detailed information will be provided for health maintenance such as naturopathy, Ayurveda, Homeopathy, etc.

This will not be offered in allopathic hospitals, but in other designated clinics. The construction of these devices for the public must be protected from political intrusion and other greedy forces.

The plan is first to access and treat people who suffer the most serious problems, but eventually provide each family with a device.

This device will not replace all medical care because some accidents, for example, will require other healing approaches.

## Rejuvenation with pills

Two specific pills will restore life anyone within 24 hours.

## Resuscitation Cameras

The cameras will be available to return life and health to anyone after a few hours (not days) of his death.

They say it's an invention outside the very old world, like the one used by aliens in the movie ' Stargate

## REPLICATORS

Similar to a small oven, the replicators work in the plasma to turn it into any material: Food, clothing, various objects (each replicator specializes in an object type).

A large computer database will allow the user to choose an item and if the item requires a body adjustment, the device will examine the user to identify their size and then produce it in seconds.

Any recipe can be produced and it is said that food looks and tastes as good as real food, but it will not require the cultivation or slaughter of animals. Furthermore, no residue will be generated because the container provided and the leftovers can be recycled in the replicator itself, as it can transform any material into any other material.

The first versions of the replicators are the current 3 D printers. Some advanced versions were built. For example, in China, a replicator has built several houses (200 square feet each) in 24 hours.

The implications of food production are far-reaching: with the overall deployment of this resource, there will be no need for extensive use of the land for agriculture and livestock, so it will not depend on climate or climate, and not least, the lack of food.

However, small-scale agriculture and agriculture will remain available for people who like these activities and for those who prefer traditional foods.

## TELEPHONE TRANSPORT VEHICLES

The 2-seat futuristic-looking scooters designed for transport from one place to another are manufactured in a new material called "Plex" and similar to plexiglass; they can teleport 2

people anywhere in the world in 15 Minutes at most, and in distant places outside the world in a few minutes.

That means you can go from North America to Europe for dinner and go back to the night.

In fact, the operation is described as " Antigravity ", " jumping in time " and " the device does not move, but it is the space around it that moves ".

A Holographic Map Card allows users to target the destination. This does not create pollution and is totally protected against accidents.

These vehicles, as well as similar buses, have been built since 2010 and are now awaiting an installation in the southeast to be sent to the market

But for people who still want traditional cars, they will also be available.

This will provide a drastic reduction in pollution.

In addition, there are plans to colonize other planets, which implies massive immigration to other planets and therefore put an end to overpopulation on earth.

## **ENVIRONMENTAL CLEANING**

There is a "stunning" approach that quickly cleans any waterway, including the oceans, as well as soil and therefore plants, etc.

A 600 million-Year-old microbe, once properly fermented, has the ability to clean any oil leak; after cleaning, it ends and leaves only nitrogen and oxygen.

## **GENERATORS / ENERGY BOXES**

Free Energy-based energy devices, the size of a small humidifier, can feed a whole house forever, without replacement.

A few years ago, there is a deposit of 300,000 square feet full of them, waiting to be transferred as soon as the opposing economic forces are eliminated

## **LEARNING CENTERS**

Mentors are already trained to teach the population the true history of the world and humanity, including all atrocities, so that they never happen again.

With this objective, learning centers are established throughout our world. each with a large database.
